## Fractions of a Quantity

1. Type in the boxes to complete the calculations.
$\frac{1}{8}$ of $32=32 \div \square$

$$
\frac{1}{2} \text { of } 98=98 \div \square
$$

$$
\frac{1}{4} \text { of } 64=\square \div \square
$$

2. Share the counters equally across the bar model to find each fraction of the quantity. Type your answers in the boxes.

3. $\frac{1}{5}$ of $30=\square \quad \frac{2}{5}$ of $30=\square \quad \frac{3}{5}$ of $30=\square \quad \frac{4}{5}$ of $30=\square \quad \frac{5}{5}$ of $30=\square$

4. Solve this problems in two steps. First, find the value of one part. Then, use this to help calculate the value of more than one part. Type your answer in the box below.

Tim drinks $\frac{4}{9}$ of a 540ml bottle of juice. How many millilitres of juice did he drink?
$\square$ ml
